**Project:** Air Deposition Scoping Study

**Description:** The purpose of this project was to perform a literature review of air monitoring activities conducted by BAAQMD, ARB, USGS, and other agencies to determine to what extent monitoring objectives between air resources agencies and stormwater management agencies overlap. In addition, a determination was made of the level of uncertainty of loading estimates of inorganic and organic trace substances to Bay Area surface waters via aerial deposition. The project report summarizes the collected information and makes recommendations.

**FY:** 96/97

**Overseer:** Monitoring Committee

**Contracting Agency:** BASMAA

**Contractor:** San Francisco Estuary Institute (SFEI)

**Budget:** \$10,000

**Status:** Done

**Deliverable(s):** *Scoping Study of Air Deposition Monitoring Information Relevant to Water Quality of San Francisco Bay: Final Report (September 1998)*
