Project: Video on Using *Start at the Source* to Comply with Development Standards booklet

Description: The purpose of this project was to provide a training video on how to apply the concepts described in the Using *Start at the Source* to Comply with Development Standards booklet. As a Task of Regional Benefit, BASMAA developed the booklet *Using Site Design Techniques to Meet Development Standards for Stormwater Quality* (April 2003) as a companion document to BASMAA's *Start at the Source* manual. The purpose of the booklet is to provide guidance to municipal agencies and developers on how to use site design techniques such as those described in the *Start at the Source* to comply with stormwater flow and volume control standards for new and redevelopment contained in provision C.3. of the municipal stormwater permits. The video provides outreach about the booklet, and training on how to apply its concepts.

FY: 02/03

Overseer: New Development Committee

Contracting Agency: BASMAA

Contractor: Greening America

Budget: \$28,000

Status: Done

Deliverable(s): *Using Site Design Techniques to Meet Development Standards for Stormwater Quality–Video* (June 2004)
